

### **How do you know if solar power works for you?**

location. location. location.

If you live in:

Seattle - You get the least amount of sun and need the most expensive system, costing \$16,800\*. But thanks to big statewide tax breaks, you recoup costs in 6 years.

Miami - You'll need a \$12,800 system. No state financial incentives for solar means payback would take 20 years.

Phoenix - You get plenty of sun and need a \$7,600 system. Low state financial incentives leads to payback in 9.2 years.

Chicago - You'll need a \$11,400 system. Small state financial incentives result in payback in 12 years.

\*Based on a 5,000 kWh system, which would offset about half the energy use of an average U.S. home.
